ColorCert®: X-Rite Edition

X-Rite Pantone  Grand Rapids, MI  www.xrite.com

ColorCert: X-Rite Edition is a Cloud-based standards-compliant solution for exceptional color management from customer file through production. It delivers statistical process control for defining, monitoring, and communicating production quality across the plant or around the globe.

Whether a business is single-site or multisite, growing or consolidating, ColorCert ensures color quality processes are performing to expectations. ColorCert is composed of a choice of modules to meet specific industry and business requirements, both for printers and their brand owner customers:

➤ **ColorCert Master** is a software package providing immediate access to color control data in any type of print or packaging manufacturing facility. It simplifies recording of and access to important production data and, when used with handheld instruments, reduces measurement errors.

➤ **ColorCert ScoreCard Server** tracks performance across the plant or a base of suppliers, with data presented in an intuitive dashboard. Production results are fed into the scorecard and are accessible in real time. Operations using X-Rite eXact spectrophotometers and other supported devices to monitor color quality can quickly, easily, and automatically upload measurements to the ScoreCard Server.

➤ **ColorCert Client**, an entry-level solution for ink companies and production facilities, enables real-time reporting of color quality characteristics to the ScoreCard Server. It makes it easier for to follow defined processes specified by a brand, a prepress house, or a plant quality manager, and track to those standards.

Incorporating ColorCert into the PantoneLIVE workflow delivers a complete end-to-end closed-loop solution for ensuring that color is right the first time and right every time, regardless of producer, technology, substrate, or geography.
